**INSTALLATION STEPS**

**TOOLS REQUIRED**
- 5/32-inch Drill Bit
- 7/64-inch Drill Bit
- Phillips Head Screwdriver

1. Designate your mounting locations for each Rock Light Pod and the control box. (Refer to page 3 for recommended mounting locations) **Avoid hot surfaces and/or moving parts.**

2. Use a pen to mark the holes where you want to mount the Rock Light Pods. Then, drill a 5/32” hole(s) for the wire connector to pass through.

3. Drill a 7/64” hole for each marked hole.

4. Secure the Rock Light Pods using the included screws. (If mounting on a rounded or uneven surface, utilize the optional rubber mounting pads.)

   **Caution:** Rock Light Pods become extremely hot during use - keep away from any vehicle parts that may be damaged by exposure to high temperatures.

5. Connect all Rock Light Pod lines to the control box connectors. Secure by twisting.

6. Connect the red positive line from the control box either directly to the vehicle battery or by using an open fuse tap.

7. Ground the negative wire from the control box by connecting it to an unpainted area on your vehicle's frame.

8. Using a fuse tap, connect the 12V accessory wire from the control box to a power source that turns on ONLY when the key is turned to the ACC/ON (second) position. Common power sources are the vehicle's radio or cigarette lighter. **The kit will not function without this connection.**
